EXPERIENCE

Three21, Orlando FL — *Web Developer*

FEBRUARY 2017 - PRESENT

Being part of a small but capable team of three developers I had to take on a Full Stack developer role. This includes providing templates with automated workflows for local development as well as setup staging/live environments between multiple hosting services. Besides building custom WordPress themes/plugins, I have also built custom features for clients and recently started development on a native Android app.

Purple, Rock, Scissors, Orlando, FL — *Front End Developer*

AUGUST 2016 - DEC 2016

Joining the team Full time I built my first client project with WordPress and saw the project from design hand off to launch.

Purple, Rock, Scissors, Orlando, FL — *Developer Intern*

MAY 2014 - AUGUST 2016

My intro to the chaotic world of Agency life with a ton of projects with short turnarounds. This was also when I was thrown into the fire of CMS's like Drupal and WordPress. I learned a great deal about the roles and process of web development in the marketing industry.

EDUCATION

Full Sail, Winter Park, FL — *BS Computer Science*

FEBRUARY 2014 - MARCH 2016

This crash course into web technologies has led me from the front to the back end of development. Going through SSL & Databases I found my way to the wonderful world of JS Frameworks like ReactJS and AngularJS enabling me to build out my ideas into prototypes.

SKILLS

Prototyping

Wireframing

Accessibility

Semantic Markup

Responsive Design

Browser Compatibility

LANGUAGES

HTML5

CSS3/SCSS

JS/ES6/Typescript

PHP

Kotlin

Frameworks

Angular 2+ / ReactJS

Bootstrap

MaterializeCSS

Angular Material

Tools

Gulp/NPM

Sketch

Browsersync

Android Studio

Wrike

Jira

Git

PROJECTS

Green Light Group Tours — *WordPress*

<https://greenlightgrouptours.com/>

This was a fun design to bring to life. Using Underscores as a foundation for this custom theme I had to build the backend editor to be easy enough for the client to make changes and add content to their site on their own - Advanced Custom Fields really helped with that.

Picture Perfect Pallet — *Angular 2+*

<https://mikagurrola.github.io/picture-perfect-palette/>

This is a simple app that utilizes the Unsplash.com api to get recent/popular images and a Vibrant JS to get the dominant colors of an image to create a color palette. You can also upload your own image to create a palette. I really wanted to play with router animations and lazy load pages/components.
